

## **Activity I. An IT guy and his software can certainly help improve a coffee shop in several ways. Fill in the blanks to complete the text:**

*processed, create,  
streamline, manage, collect,*

Streamlined Ordering Process: The IT guy can develop a custom software solution that integrates with the coffee shop's point of sale system to \_\_\_\_\_ the ordering process. This software can allow customers to place their orders through a tablet or a self-service kiosk, reducing wait times and freeing up baristas to focus on other tasks.

Inventory Management: The software can also be used to \_\_\_\_\_ the coffee shop's inventory, tracking the stock levels of ingredients and alerting the shop owner when supplies are running low. This can help prevent waste and ensure that the shop always has enough supplies on hand to meet customer demand.

Customer Data Collection and Analytics: The software can \_\_\_\_\_ data on customer orders and preferences, providing valuable insights into which menu items are the most popular and what times of day are the busiest. This information can then be used to make data-driven decisions to improve the coffee shop's operations and customer experience.

Marketing and Promotion: The software can be used to \_\_\_\_\_ and send targeted marketing promotions to customers through email or SMS, helping to drive repeat business and increase overall revenue.

Secure Payment Processing: The software can also ensure that all transactions are \_\_\_\_\_ securely and efficiently, reducing the risk of fraud and increasing customer trust in the coffee shop.

By leveraging the skills of an IT guy and utilizing custom software, a coffee shop can improve its operations, provide a better customer experience, and increase its bottom line.
