Activity I. Read the text:

Coffee brewing is the process of extracting flavor and aroma from ground coffee beans by exposing them to hot water. The following steps will guide you through the process of brewing coffee:

1. Grind the coffee beans: Start by grinding fresh coffee beans. The grind size will depend on the brewing method you will use. For example, a French press requires a coarse grind while an espresso machine needs a fine grind.
2. Boil water: Heat the water to the desired temperature. The ideal temperature for brewing coffee is between 195-205°F (90-96°C).
3. Prepare the filter: If you are using a paper filter, place it in the brew basket or holder. Wet the filter with hot water to remove any paper taste and to warm up the brewing vessel.
4. Add coffee to the filter: Add the ground coffee to the filter. The amount of coffee used will depend on the desired strength and the number of servings. A good rule

of thumb is to use 1-2 tablespoons of coffee per 6 ounces of water.

5. Pour water over the coffee: Slowly pour hot water over the coffee grounds. Use a circular motion to ensure all the coffee is evenly saturated. Allow the coffee to bloom (expand) for 30 seconds before adding the rest of the water.
6. Brew time: The amount of time the coffee brews will depend on the brewing method. A French press will take 4-5 minutes, while drip coffee can take 2-4 minutes. Espresso machines will take only 20-30 seconds.
7. Serve: Once the coffee has finished brewing, remove the filter and dispose of the grounds. Pour the coffee into a mug or carafe and enjoy.

The quality of your coffee will depend on the quality of your beans, the grind size, water temperature, brewing time, and other factors. Experiment with different variables to find the perfect cup of coffee for your taste buds.
